README  

Ollama Chatbot

A simple Python chatbot that uses Ollama's local language models for conversational AI.

Prerequisites

- Ollama installed on your desktop ([Download here](#))
- Python 3.7+ installed

Setup

1. Install dependencies:

```
pip install -r requirements.txt
```

2. Start Ollama server:

```
ollama serve
```

(Keep this running in a separate terminal)

3. Pull a model (if not already done):

```
ollama pull llama2
```

Other available models:

- `ollama pull neural-chat` (faster, good for chat)
- `ollama pull mistral` (powerful, more resources needed)
- `ollama pull dolphin-mixtral` (good quality)

Usage

Run the chatbot:

```
python chatbot.py
```

Then start chatting! Commands:

- Type your message and press Enter
- Type `clear` to clear conversation history
- Type `quit` to exit

Example:

You: Hello, who are you?

Bot: I'm an AI assistant created by... [response streaming]

You: Can you help me with Python?

Bot: Of course! I can help with Python programming...

Features

- ☒ Real-time response streaming
- ☒ Conversation history (for context)

- ☒ Multiple model support
- ☒ Connection checking
- ☒ Model availability detection
- ☒ Clean CLI interface

Advanced Usage

Using with a different model:

Edit `chatbot.py` and change the model name:

```
chatbot = OllamaChatbot(model="neural-chat")
```

Using in your own Python code:

```
from chatbot import OllamaChatbot

# Create instance
bot = OllamaChatbot(model="llama2")

# Check connection
if bot.check_connection():
    # Get response
    response = bot.chat("What is Python?")
    print(response)
```

Troubleshooting

"Cannot connect to Ollama"

- Make sure Ollama is running: `ollama serve`
- Check if it's running on the correct URL (default: <http://localhost:11434>)

Models not showing up

- Pull a model: `ollama pull llama2`
- List available models: `ollama list`

Slow responses

- Use a smaller/faster model like `neural-chat`
- Check your system resources

Performance Tips

- **Fastest:** `neural-chat` (4.8 GB)
- **Balanced:** `mistral` (4.1 GB)
- **Best quality:** `dolphin-mixtral` (26 GB, needs good GPU)
- **Most compatible:** `llama2` (3.8 GB)
